# Agenda

- › What is a smart contract?
- › Is a smart contract a legal contract?
- › Code is law?
- › Case study
- › Conclusion

# What is a smart contract?

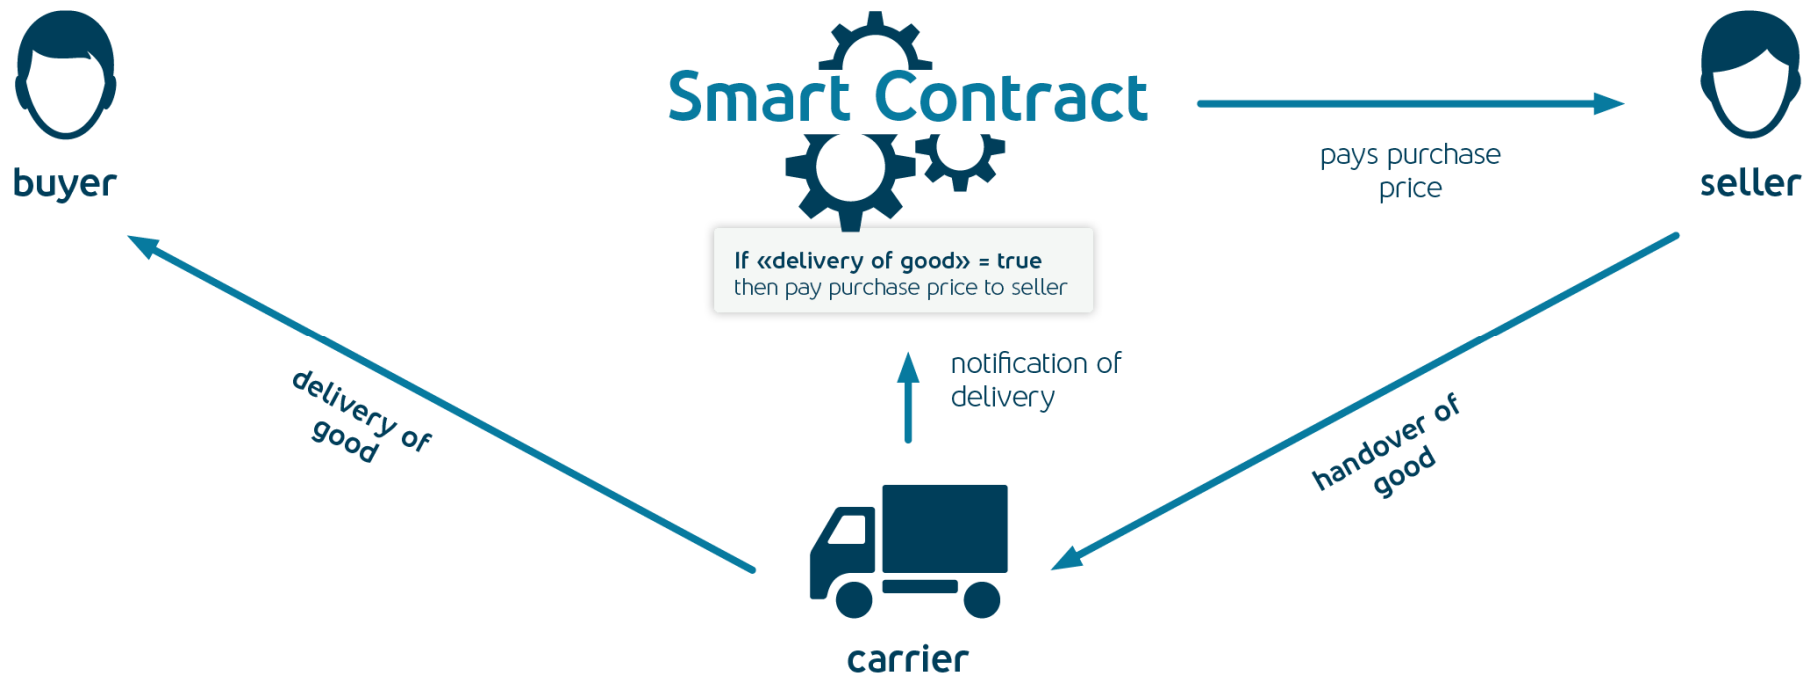

- › *“A smart contract is a set of promises, specified in digital form, including protocols within which the parties perform on these promises.”*

(Nick Szabo, Smart Contracts: Building Blocks for Digital Markets, 1996)

# Example I - smart rental agreement

# Example 2 - smart sales agreement

**Is a smart contract a legal contract?**

# Is a smart contract a legal contract?

- › The statement of the concurring intentions of the parties causes the inception of a contract.
- › Obligation versus Execution
  - Obligation / title: concurring intentions: clicks,...
  - Execution: self executing code
- › Germany:
  - Readability is crucial.
- › Liechtenstein:
  - Freedom of contract & form.

```

# A smart & legal contract?

- › The parties want to enter into a smart contract (agreement).
- › The parties declare concurring intentions.
- › There is no formal requirement.

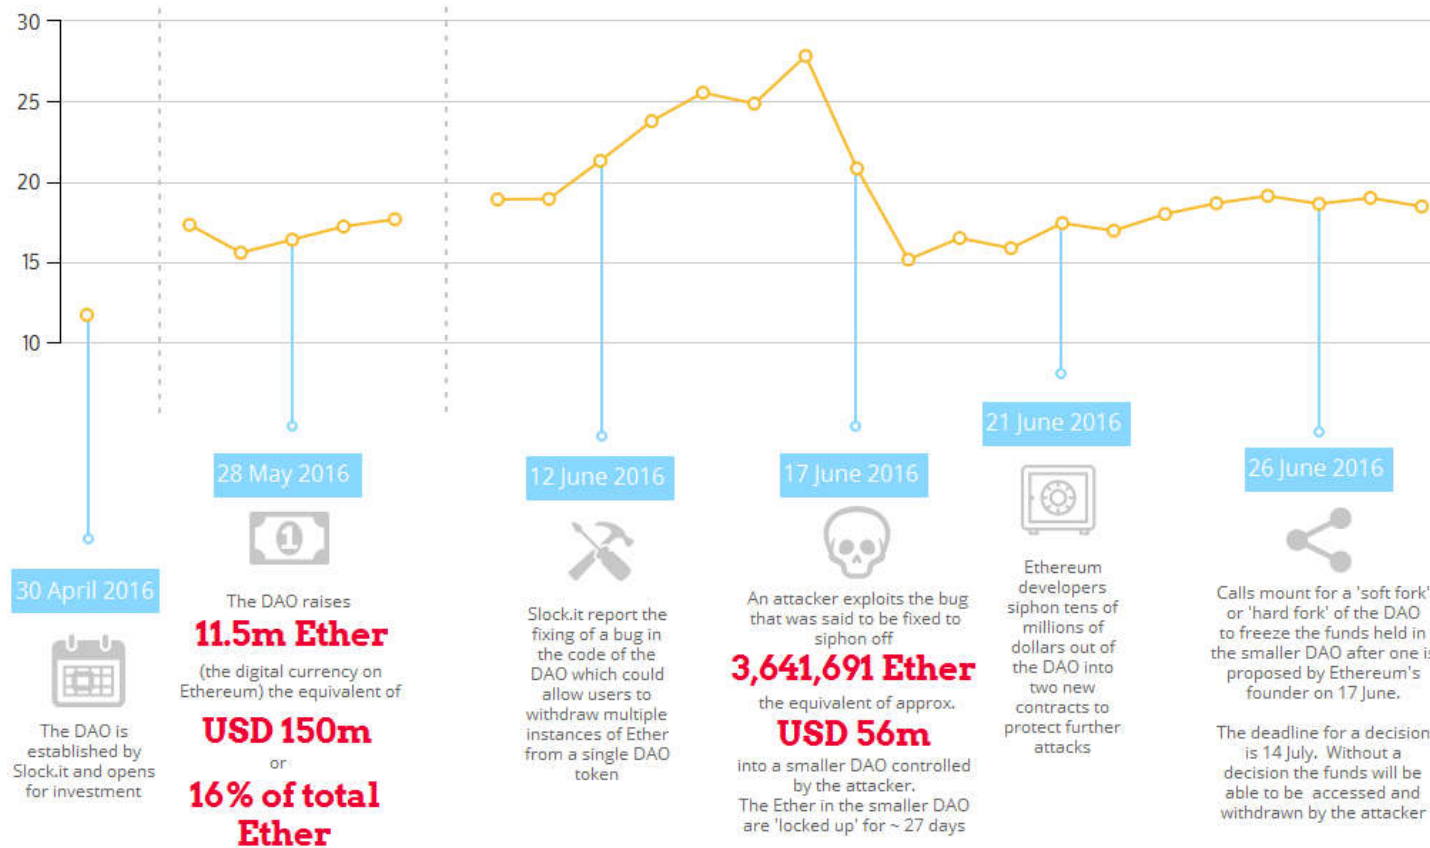

## «Code is Law»?

code source: <https://github.com/KingandWoodMallesonsAU/Project-DnA/blob/master/Project%20DnA%20Digital%20Terms>

# Code is law – is it that simple? I/2

- › Law - no human interpretation?
  - Early attempt in the 18th century with Bürgerliches Gesetzbuch (BGB)
- › The DAO Attack

# The DAO Attack

## Code is law – is it that simple? 2/2

- › Good manners § 879 ABGB
- › Consumer protection laws, transparency rules
- › Mandatory forms, e.g. renunciation of inheritance, last will,...
- › Warranty, notification of defects, dissent & errors

## Smart rental contract

Limitations by mandatory law

# Case study – smart rental contract 1/3

# Case study - smart rental contract 2/3

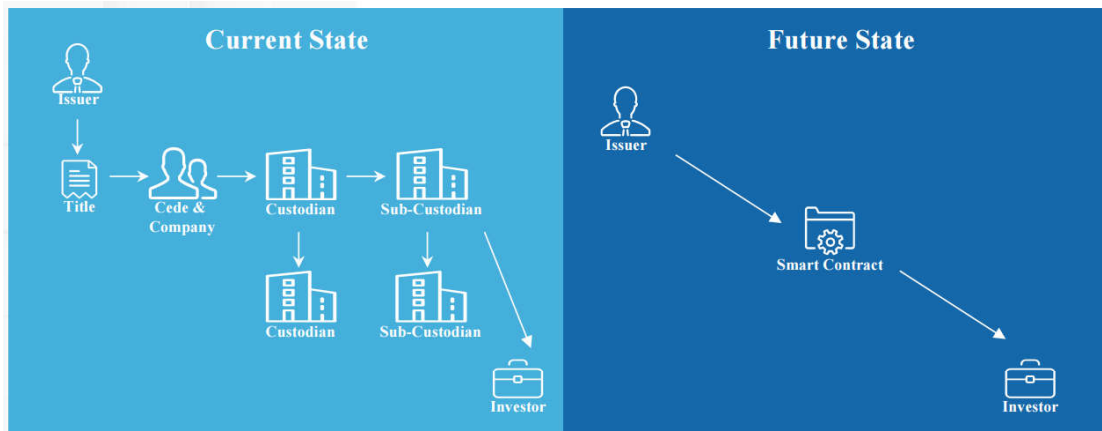

# Case study – smart rental contract 3/3

- › Limitations by mandatory law?
  - Tenant protection laws
  - Good manners § 879 ABGB
- › Liabilities?
  - Error in code: missing national holidays?

## Conclusion

- › A smart contract is not necessarily a legal contract.
- › «Code is law» is only half of the story, it is limited by mandatory laws.

# 12 use cases for smart contracts

## Current Challenges

- Paper-based, manual corporate registration processes
- Companies that fail to keep their corporate registrations up-to-date require clean-up and certificate of good standing before issuing securities
- Intermediaries increase cost, counterparty risk and latency

## Smart Contract Benefits

- Digitized end-to-end workflows due to securities existing on a distributed ledger
- Trade date plus zero days (T+0) securities settlement cycles
- Facilitates automatic payment of dividends and stock splits, while enabling more accurate proxy voting
- Removes counterparty and operational risks created by intermediaries
